10 Things To Remember About MDR

PONDURANCE

The security solutions market is growing about as fast as cybercriminals are coming up with new ways to attack. When you're shopping for a new solution, how do you know what to prioritize? Which solution is right for you? Could managed detection and response (MDR) be the answer you've been looking for?

Keep these 10 things in mind when you're hunting for a new provider:

- ☐ **The security landscape is evolving, so you need to be prepared for anything**

- ☐ **Modern attacks can be hard to identify, and bad actors sit dormant for a long time**

- ☐ **There's a visibility problem with blind spots and an inability to monitor all attack points in detail**

- ☐ **MSSP, SIEM, and MDR bring different things to the table; some have more tools and some are more of a service**

- ☐ **MDR accelerates the incident response life cycle, bringing you back to normal operations faster**

- ☐ **Not all MDRs are created equal; some may specialize in monitoring and analyzing network-related threats while others focus on endpoint detection and response**

- ☐ **Human expertise is key to catch things the security tools don't**

- ☐ **Modern MDR is always on and always available (24/7)**

- ☐ **Modern MDR complements existing security tools; no need to ditch your current tech stack**

- ☐ **Modern MDR can evolve with the ever changing security landscape with security experts on staff**

MDR services set themselves apart from other security solutions as it combines the human element with technology to provide true 24/7 coverage against any threat. Learn more about MDR in the first-ever *MDR for Dummies Guide*.
