Exposure & Vulnerability Service

PONDURANCE

A HOLISTIC APPROACH

REDUCING EXPOSURES ON YOUR ATTACK SURFACE WHILE LIMITING RISKS FROM EXPOSED VULNERABILITIES

Exposure management and vulnerability management are both crucial to supporting a strong security posture for your organization. Exposure management focuses on understanding the entirety of your organization's attack surface while vulnerability management focuses on system weaknesses, whether exposed externally or otherwise.

The Pondurance Exposure & Vulnerability Service uses a dynamic approach that can accurately assess your organization's exposure risks and narrow down which vulnerabilities are a top priority to protect your environment from cyberattacks and data breaches.

THE CHALLENGE

PIt is common that organizations have limited visibility into everything in a system's environment that is externally exposed making it challenging to protect their external attack surface. Additionally, with 52,000 known, reported systems vulnerabilities it is a herculean challenge to stay on top of patching just the ones that represent the highest risks, more less every known vulnerability in your environment.

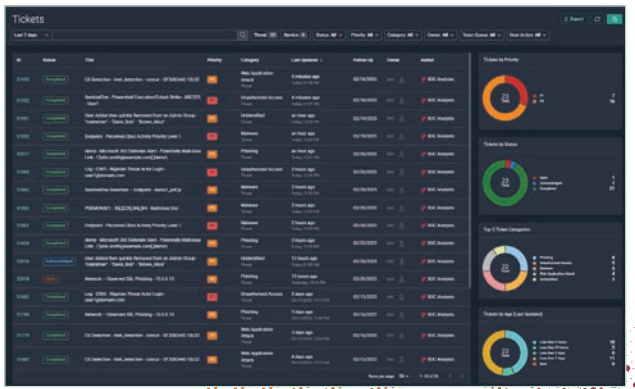

This challenge is exacerbated due to the dynamic nature of what is exposed on your external attack surface, the on-going volume of new vulnerabilities that come into play, and how the scoring of risks is done. Traditional methods for assessing the severity of vulnerabilities often lead to an excess of "Critical" and "High" designations, making it difficult for security teams to identify and address the true pressing risks effectively and creating a backlog of vulnerabilities that never get addressed.

This can lead to your organization being exposed to excessive risks of cyber intrusions resulting in data breaches.

THE SOLUTION

The Pondurance Exposure & Vulnerability Service provides the ability to understand and monitor your external attack surface exposure, continually monitor to detect new vulnerabilities, and use this improved visibility to address the highest risk threats as they emerge with timely remediation. So you'll know where you can focus on limiting your external attack surface as well as patching your most significant vulnerabilities.

This service achieves these objectives in eliminating sources of data breach risk through a combination of agent-based scanning, use of the proprietary Pondurance Exposure Index™, and seamless integration with the Pondurance managed detection and response (MDR) platform and its elegant, consumer-grade user console.

Exposure & Vulnerability Service

PONDURANCE

THE SOLUTION (CONT'D)

Agent based scanning

- **Real-time detection –** Continuously monitors for new vulnerabilities on individual devices
- **Improved visibility –** Provides deep insights into assets and their vulnerabilities
- **Simplified management –** Eliminates the need for complex network scans and credentials

PONDURANCE EXPOSURE INDEX™ (PEI)

- **Prioritization –** Quantifies the likelihood and impact of each vulnerability
- **Focus –** Reduces the number of vulnerabilities your organization needs to address
- **Efficiency –** Focuses on the most critical threats to save your organization time and resources

SEAMLESS INTEGRATION & UNIFIED USER EXPERIENCE

- **Pondurance platform and user console –** Provides a centralized view of vulnerabilities alongside other security data
- **Managed detection and response services –** Offers enhanced threat analysis and faster response times
- **Efficiency –** Focuses on the most critical threats to save your organization time and resources

KEY BENEFITS

Eliminate breach risks

This service empowers you and your organization to address exposures and vulnerabilities before threat actors can exploit them. Our agent-based scanning software runs continuously resulting in faster detection of new exposures and vulnerabilities, thereby reducing risks of a successful intrusion.

INCREASE OPERATIONAL EFFICIENCY

Our user console provides a unified view into your system exposures and vulnerabilities. By simplifying the user experience for your team, and for our security operations center (SOC) experts, we make it easier to focus on the highest priority risk factors. By analyzing emerging threats and contextual information across the environment, we elevate vulnerabilities that represent genuine, high impact threats.

RISK-BASED DECISIONS

We provide the ability for you to adopt a continuous threat exposure management (CTEM) methodology to maintain an optimized security posture. By quantifying every exposure, integrating the most pertinent factors related to exploitability, likelihood, impact, probability of exploitation, and exploitation maturity, you have a dynamic view into your exposure and vulnerability risk profile. This results in data-driven decision making based on real-time threat intelligence.

CONTACT US

Contact Pondurance today at 1-888-385-1702, or visit our website at pondurance.com, to learn how the our Exposure & Vulnerability service can help your organization identify and prioritize threats to your external attack surface, and associated vulnerabilities, in order to eliminate breach risks.
