Vulnerability Management Program (VMP) for Healthcare

PONDURANCE

Reduce Your Future Attacks

Healthcare organizations face many vulnerabilities in today's dynamic threat landscape. Healthcare security and risk management leaders are under tremendous pressure to eliminate vulnerabilities to stay secure and compliant across legacy systems, IT resources, medical devices, and electronic protected health information. As a result, healthcare providers like you must rethink their VMPs to reduce the likelihood of attacks.

With experience across many healthcare organizations, Pondurance VMP provides a managed service to continually identify, categorize, and prioritize vulnerabilities, as well as recommend actionable insight to remediate potential threats. Our team of highly experienced security operation experts examines components within your environment that pose potential threats.

BENEFITS

- Quickly identify and patch the most critical vulnerabilities that enable patient data theft and ransomware.
- Demonstrate HIPAA compliance and avoid penalties and fines through effective vulnerability management.
- Quantify risks to build a risk management plan.
- Gain actionable insight into your internal and external risks.
- Get 24/7 access to Pondurance's Security Operations Center (SOC) Team and always-on vulnerability reports

OUR PEOPLE

Highly Experienced Pondurance SOC Team

Pondurance's SOC Team has experience working with healthcare clients and understands the complex threat landscape and broad attack surface generated by patient data, hospital OT devices with long service lifecycles and segregated workstations across multiple networks. Our highly skilled team threats that are not easily discovered through automated processes. We provide ongoing support, giving you the confidence to reduce the likelihood of future attacks.

HOW IT WORKS

Weekly Threat and Vulnerability Scans – Pondurance provides your team with a weekly report that identifies relevant vulnerabilities based on findings and client inventory. We assign risk ratings and alert clients of potential threats and vulnerabilities that align with the asset inventory.

Specialized Threat and Vulnerability Inventory Assessment and Scanning – Pondurance works directly with your healthcare security and IT team to conduct a comprehensive inventory of the elements within your healthcare environment that will be scanned and assessed for threats and vulnerabilities.

Comprehensive Monthly External and Quarterly Internal Vulnerability Scanning – Pondurance will perform a detailed security analysis and vulnerability scanning on a continuous, monthly, and quarterly basis. Our SOC Team targets threats and vulnerabilities from the outside in, with a monthly external scan to find the weakest points of exploitation. An internal quarterly vulnerability scan targets the most relevant internal servers and devices.
